

PROCESS ENGINEER

Lundberg is seeking a process engineer with a chemical engineering degree to join our growing company. We are the leading worldwide supplier of process systems in several areas within the pulping industry. Further, our Geoenergy division offers air pollution control technologies which are utilized throughout the wood products industries, as well as in many other industries currently subject to EPA MACT regulations.

Primary Duties will include:

- Process engineering calculations and equipment sizing.
- Technical proposal generation for equipment and services.
- Review of technical documents and specifications.
- Cost estimation of equipment and services.
- Correspondence with our vendors, clients, engineering firms, partner companies etc.
- Interfacing with our designers, project managers, engineers etc.
- Occasional travel to attend meetings and participate in sales efforts.

Salary is dependent upon experience and education.

QUALIFICATIONS: PROCESS ENGINEER

The successful candidate will possess the following qualifications:

- A chemical engineering degree is preferred.
- 5 years of similar experience preferred.
- Proficient with Microsoft Excel, Microsoft Word, Microsoft Powerpoint etc.
- Must have good oral and written communications skills.
- Demonstrated ability to work in a team environment.
- Focused and efficient with time management and meeting deadlines.
- Self-motivated with a desire to learn and grow in a professional environment.

We are an equal opportunity employer, and offer a competitive salary and benefits package.
