BENEFITS

Soap skimmings collected from the kraft pulp mill evaporation and brown stock washing systems often contain significant quantities of black liquor. To avoid chemical loss in the pulp mill and excess chemical usage at the tall oil plant, the entrained black liquor must be separated from the soap. Some of the black liquor will drain out by gravity; however, facilitating the liquor drainage will improve the soap yield and soap quality. The Lundberg Soap Separator mechanically performs this task. For mills with tall oil acidulation plants, the liquor reduction provides significant acid savings and brine reduction.
